What is the Limbo Crypto Game?

At its core, Limbo is a crash-style game inspired by the timeless "high-low" or multiplier mechanics found in early cryptocurrency betting platforms. Unlike traditional slots that include spinning reels and complicated paylines, Limbo provides the player with a single, clean interface: a target multiplier and a win opportunity.

The property is straightforward:

1. The gamer positions a wager in their selected cryptocurrency (e.g., Bitcoin, Ethereum, GBPT, or Dogecoin).
2. The gamer sets a **target multiplier** (e.g., 2x, 10x, 100x, or even 1,000,000 x).
3. The game produces a random multiplier result.
4. If the generated multiplier is **higher than or equivalent to** the target multiplier, the player wins. If it fails, the bet is lost.

Due to the fact that the game is hosted on crypto platforms, practically every credible version of Limbo is **provably reasonable**. This implies gamers can individually validate the cryptographic hash of every round to guarantee the casino did not manipulate the result.

For example, on a platform with a 1% home edge:

- If a gamer sets a target of **2.00 x**, the win chance is roughly **49.5%**.
- If a gamer sets a target of **10.00 x**, the win opportunity drops to **9.9%**.
- If a gamer sets a target of **100.00 x**, the win chance plummets to **0.99%**.
