What is the Rock Paper Scissors Gambling Game?

At its core, the gambling version of Rock Paper Scissors runs on the exact same standard guidelines as the conventional game:

- **Rock** squashes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a gambling context, gamers put a wager before tossing their hand. This can take place in two main formats:

1. **Peer-to-Peer Wagering:** Two players agree on a stake, make their selections all at once (often through clever agreements or trusted intermediaries), and the winner takes the pot.
2. **Gambling Establishment House Games:** A player wagers versus a random number generator (RNG) or a live dealer platform. In these setups, the payout structure normally offers even cash (1:1) on a win, while ties might result in a push or a cottage edge depending on the platform's particular guidelines.

Understanding the Odds and House Edge

Mathematically, a basic round of Rock Paper Scissors is a zero-sum game with three equally most likely outcomes for each player: Win, Lose, or Tie.

Outcome Likelihood (Random Play) Typical Payout **Win** 33.33% 1:1 (Even Money) **Loss** 33.33% Loss of Stake **Connect/ Draw** 33.33% Push (Bet Returned) or House Win *

** Note: Some platforms take a rake on wins or treat ties in a different way to develop a house edge, just like the tie bet in Baccarat.*
