At its core, Limbo is a specialized type of a crash game. Promoted mainly by crypto-focused online casinos, the game takes inspiration from the traditional limbo dance concept: *how low (or in this case, how high) can you go?*

Unlike conventional casino video games where gamers position bets and wait on cards to be dealt or reels to stop, Limbo operates on a single variable set by the user: **the target multiplier**.

The gamer sets a desired payout multiplier (e.g., 2x, 10x, or even 1,000 x), places a wager, and hits the "Bet" button. The game's algorithm then generates a random multiplier. If the created multiplier amounts to or greater than the player's target multiplier, the bet wins. If it falls short, the bet is lost.

Secret Characteristics of Limbo:

- **Minimalist Interface:** Usually including simply a few input boxes and a huge multiplier readout.
- **High Multiplier Potential:** Players can often target multipliers ranging from a modest 1.01 x to a huge 1,000,000 x.
