What is the Limbo Casino Game?

Limbo is an instant-win game established mostly by software application suppliers specializing in crypto-gaming, such as Stake, Spribe, and BGaming. It belongs to the "crash game" family (sharing DNA with titles like *Aviator* or *JetX*), but with a considerably more minimalist discussion.

How Limbo Works: The Core Mechanics

Comprehending the mechanics of Limbo is uncomplicated, making it available to novices while offering adequate depth for skilled bettors. Here is a breakdown of how a common round unfolds:

1. **Place a Bet:** The player selects their desired wager amount for the round.
2. **Set a Target Multiplier:** The player inputs a target multiplier (e.g., 2.00 x, 10.00 x, and even 100.00 x). The minimum multiplier is normally 1.01 x, while the optimum can stretch as much as 1,000,000 x or more, depending on the platform.
3. **Roll/Spin:** The gamer clicks the bet button.
4. **The Result:** The game's random number generator (RNG) immediately produces a multiplier result.
5. **Win or Lose:** If the created multiplier is *equivalent to or greater* than the target multiplier, the gamer wins. The payout is computed by multiplying the bet by the target multiplier. If the outcome falls below the target, the bet is lost.

Example Scenario

- **Bet Amount:** £ 10
- **Target Multiplier:** 5.00 x
- **Result A (Win):** The game generates an outcome of **7.25 x**. Since 7.25 x is higher than 5.00 x, the player wins. The payout is £ 10 × 5.00 = £ 50 (a £ 40 net earnings).
- **Outcome B (Loss):** The game produces a result of **3.12 x**. Considering that 3.12 x is lower than 5.00 x, the bet is lost.
