However, a single error results in striking a trap, triggering the tower to collapse and the player to lose their stake for that round. Gamers can choose to squander their earnings at the end of any successful row, including a constant psychological predicament: *take the guaranteed profit now, or risk everything for a higher multiplier?*

Core Mechanics: How the Game Works

1. Grid Configurations (Difficulty Levels)

Before beginning a round, gamers normally pick a difficulty level, which modifies the measurements of the grid and the risk-to-reward ratio. Common setups consist of:

- **Easy Mode:** Usually features a 3-tile or 4-tile large grid with only one trap per row. The course is safer, however multipliers grow gradually.
- **Medium Mode:** Often a 3-tile large grid with two traps per row, or a 4-tile grid with numerous traps. This uses a balanced danger profile.
- **Difficult/ Expert Mode:** Features narrow courses with a high concentration of traps. While exceptionally unsafe, reaching the top yields huge multipliers.

2. Multiplier Progression

As the player rises row by row, the mathematical multiplier substances. The specific development depends upon the selected difficulty and the overall variety of rows (usually ranging from 8 to 10 rows per tower).

Row Level Easy Mode Multiplier (Approx.) Difficult Mode Multiplier (Approx.) **Row 1** 1.15 x 1.50 x **Row 3** 1.52 x 3.37 x **Row 5** 2.01 x 7.59 x **Row 7** 2.65 x 17.0 x **Top Row** 4.60 x 85.0 x+

Note: Exact multipliers differ depending on the specific platform supplier and home edge configuration.
