The facility is straightforward:

1. **Place a Bet:** Before the round begins, gamers put their wager.
2. **Watch the Multiplier Rise:** As the round starts, a multiplier begins at 1.00 x and climbs upward at an unforeseeable rate.
3. **Squander:** Players need to by hand hit the "Cash Out" button before the game abruptly "crashes."
4. **Win or Lose:** If a player cashes out effectively, they win their initial bet multiplied by the current value. If the game crashes before they squander, the whole bet is lost.

The ultimate stress of the game depends on a single concern: **How long should I wait before cashing out?** Wait too long, and the game crashes, leaving the gamer with nothing. Squander prematurely, and they might miss out on a huge multiplier.
