As automobile security technology advances, so do the countermeasures developed to protect cars. One of the most advanced security gadgets on the marketplace today is the **Ghost Immobiliser**. What is a Ghost Immobiliser?

Developed by Autowatch, the Ghost Immobiliser is the world's first aftermarket CAN-bus immobiliser. Unlike traditional alarm or immobilisers that rely on different crucial fobs or loud sirens, the Ghost is entirely concealed within the automobile's electrical wiring harness.

It works by obstructing the signals on the car's Controller Area Network (CAN-bus). When a vehicle driver attempts to begin their car, the engine will not crank or start unless a distinct, secret PIN code-- ranging from 4 to 20 presses-- is gone into using existing buttons in the automobile (such as guiding wheel controls, door panels, or the center console).

Key Features of a Ghost Immobiliser:

- **Undetectable by Thieves:** Because there are no additional key fobs, LEDs, or radio frequency signals, diagnostic devices can not detect the system.
- **No Wire Cutting:** The device communicates directly with the automobile's information network without the requirement to cut basic vehicle loom wires.
- **Service/Valet Mode:** Allows the cars and truck to be serviced or parked by a valet without compromising the secret PIN code.
- **Weatherproof:** Small and resilient sufficient to be hidden deep within the automobile's internal architecture.
