Unlike Crash, where players enjoy a rocket or a line climb upward and manually cash out before it crashes, Limbo is a static game. Gamers select a target multiplier before the round begins. The game then creates a random multiplier. If the produced multiplier amounts to or greater than the player's target, the bet wins. If it falls listed below the target, the bet loses.

How a Round Works:

1. **Place a Bet:** The player picks how much cash they wish to bet.
2. **Set a Target Multiplier:** The player picks their wanted payment (e.g., 2x, 10x, 100x, or even 1,000,000 x).
3. **Roll/Spin:** The gamer strikes the bet button.
4. **The Result:** The system generates a random number. The UI shows whether the target was satisfied and computes the payment immediately.
