What is the Rock Paper Scissors Gambling Game?

At its core, the gambling version of Rock Paper Scissors runs on the very same fundamental rules as the traditional game:

- **Rock** crushes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a gambling context, players put a wager before tossing their hand. This can occur in 2 primary formats:

1. **Peer-to-Peer Wagering:** Two players settle on a stake, make their selections concurrently (often by means of wise contracts or trusted intermediaries), and the winner takes the pot.
2. **Gambling Establishment House Games:** A player wagers against a random number generator (RNG) or a live dealership platform. In these setups, the payout structure usually offers even cash (1:1) on a win, while ties might lead to a push or a small house edge depending upon the platform's specific rules.

Comprehending the Odds and House Edge

Mathematically, a standard round of Rock Paper Scissors is a zero-sum game with 3 equally most likely outcomes for each gamer: Win, Lose, or Tie. bitz.io

Outcome Probability (Random Play) Typical Payout **Win** 33.33% 1:1 (Even Money) **Loss** 33.33% Loss of Stake **Connect/ Draw** 33.33% Push (Bet Returned) or House Win *

** Note: Some platforms take a rake on wins or treat ties in a different way to develop a home edge, just like the tie bet in Baccarat.*

- **The Winner's Stay Strategy:** After winning a round, a player is statistically likely to throw the same gesture again, or toss the gesture that *beat* them in the previous round.
- **The Loser's Shift Strategy:** When a gamer loses, they tend to cycle to the next item in sequence (e.g., if they lost with Paper, they are most likely to change to Scissors in the next round).
