Table 1: Promised Features vs. Law Enforcement Realities

Function Claimed by Sellers The Reality of Counterfeit Production How Law Enforcement Detects It **"100% Scannable Barcodes"** Barcodes are typically cloned or created using openly readily available algorithms, linking to void information or dummy profiles. Advanced electronic scanners quickly flag non-standard data strings and missing state database connections. **"Genuine Holograms"** Counterfeit holograms are usually printed as flat, two-dimensional overlays rather than ingrained optical layers. Visual evaluation under angled lighting exposes an absence of depth and inaccurate reflectivity. **"Real Polycarbonate Material"** Most underground operations use

cheaper plastics (like PVC) which feel lightweight and do not have the distinct "ping" noise of genuine cards. Micro-tactile testing and flexing resistance expose inferior material structure. **"Microprint Included"** Microprint is frequently blurred, illegible, or develops into strong lines when seen under zoom.
