Instead of a single player opening a case alone in the personal privacy of their inventory, a case battle pits two or more gamers (in some cases as much as four) versus each other in real-time.

All participants in a fight contribute an equivalent buy-in-- normally identified by the cost of the cases being opened. Once the lobby is full, the system instantly opens the picked cases for all players all at once over a series of rounds. The objective is basic: **build up the highest total financial worth of dropped skins by the end of the battle.**

The winner takes home everything-- every single skin stopped by all participants during the match. If luck is on their side, a player can win products worth multiples of their initial buy-in. If they lose, they forfeit their invested skins.
