Gamers are provided with a grid (normally 3x3, 5x5, or custom sizes) hidden under tiles. Some tiles consist of "gems" or "benefits," while others hide "mines" or "bombs."

The goal is easy: reveal as numerous gems as possible to increase your multiplier before hitting a mine. If a mine is exposed, the round ends, and the player loses their wager.

Core Game Mechanics

To understand Mystery Mines, one should take a look at how the mathematics of the game moves based on the number of mines put on the grid.

Typical Mechanics Table

Grid Size	No. of Mines	Threat Level	Multiplier Potential	Gameplay
5x5	1	Very Low	Slow, steady growth	5x5 3 Low/Medium
Well balanced	5x5 10	High	Quick growth	5x5 24 Extreme "Jackpot" potential

Note: The math works by minimizing the probability of selecting a "safe" tile with every mine included to the grid.
