

A Cary Couple and Their 31 Window Replacement With Harland Windows and Siding Thirty-one windows is a big job by any standard. A typical home has somewhere between 10 and 15 windows, so a house with more than twice that number represents a serious investment and a lot of trust placed in whoever does the work. That was the situation for one Cary couple who chose Harland Windows & Siding to replace every one of them, and their account of the experience, shared on the company's website, gives a useful picture of what a large project with this Raleigh company can look like. What the couple singled out first was attention to detail. On a job with 31 openings, small things add up quickly, and every one of Harland's windows is custom made to the exact measured opening rather than forced in from a stock size. That approach is meant to give each window a tight seal against drafts and moisture, smooth operation and a clean finish with no visible gaps. For a homeowner looking at dozens of windows around the house, consistency from the first to the last is what makes the result feel finished. They also commented on how the people treated them. In their telling, the team was polite and prompt, and there was no high-pressure selling at any point. That lines up with how Harland describes its own process: a few [Window Replacement Raleigh NC](#) photos of the current windows, a visit to measure each opening, a clear written proposal, and multiple cost options instead of a two-hour sales pitch. Pricing is upfront and itemized, with no hidden fees, and window installs are handled by the company's own crew rather than subcontractors.

Harland Windows & Siding | 1401-G Diggs Dr, Raleigh, NC 27603 | 919-851-0060

Perhaps the clearest sign of how the project went came at the end of their review. The couple said they would use Harland again, and mentioned siding as a possible next step. Harland installs and replaces vinyl siding too, stripping the old material, inspecting what is underneath and installing fresh siding instead of covering problems up. For a household already pleased with its windows, keeping the next exterior project with the same company is a natural move. Cary is well within Harland's regular service area. The company works from Diggs Drive in Southwest Raleigh, near the State Farmers Market and I-40, and has completed projects across Wake County and the Triangle, including Cary neighborhoods such as Preston and MacGregor Downs where many homes from the 1980s and 1990s still have their original windows. Larger whole-house jobs take a little longer than the one to two days most homes need, and starting dates usually fall three to four weeks after booking because the windows are made to order. Anyone planning window replacement in Raleigh NC or nearby Cary, whether for a handful of windows or a full house, can start the same way this couple did. Call Harland Windows & Siding at 919-851-0060 to arrange a free estimate.

[FAQ](#) [About](#)

Window Replacement Raleigh NC How much does it cost to replace windows in Raleigh, NC? Most window replacement projects in Raleigh run between \$6,000 and \$40,000, depending on how many windows you are replacing and the type of installation. Harland Windows & Siding builds every quote around custom windows, installation by its own crew, removal and disposal of the old windows, and clean up. Estimates are free, so call 919-851-0060 for a number based on your actual home. What is the average cost of a good replacement window? The price of a single window depends on its size, style and glass package, so a budget-friendly single-hung and a large bay window can be far apart. Harland Windows & Siding offers everything from single-hung units up to Ascent triple pane and Heat Mirror glass. Your free written proposal includes several cost options, so you can compare quality levels side by side instead of guessing from an average. What is the cheapest time of year to replace windows? The biggest seasonal factor is scheduling. Spring and fall are the busiest seasons at Harland Windows & Siding, and because every window is made to order, most jobs start 3 to 4 weeks after booking. Booking early gives you more flexibility, and financing is available if spreading the cost matters more to your budget than the month you book. What is the average cost to replace 20 windows? It depends on the size of each window and the glass you choose. A typical home has 10 to 15 windows, and full-home projects with Harland Windows & Siding usually fall in the \$6,000 to \$40,000 range, so a 20-window house will depend heavily on the mix of styles and glass packages. The honest answer is an itemized quote, which the company provides free after measuring each opening. Is it cheaper to buy windows and have someone install them? Buying windows yourself can look cheaper at first, but stock sizes may need shimming to fit openings they were not made for, and you lose a single point of responsibility if something goes wrong. Harland Windows & Siding quotes custom-made windows and installation by its own crew as one price, including removal of the old windows and daily clean up. That keeps the cost clear and the fit right from the start. Is a big box store or a local installer better for window replacement? A local installer gives you more direct accountability, since the people who measure and quote belong to the same company that installs. Harland Windows & Siding has been based on Diggs Dr in Southwest Raleigh since 1986, uses its own crew rather than subcontractors and holds an A+ rating with the BBB. One Durham homeowner found its price came in at around half of the big box quotes, with a better warranty. Who has the best windows for the money? Value comes down to three things: the glass package, how well the window fits the opening and the warranty behind it. Harland Windows & Siding custom-makes every window to the measured opening and offers Heat

Mirror glass as well as the Ascent series, which carries a lifetime, non-prorated, transferable warranty. A window that seals tightly and lasts for decades can cost less over time than a cheaper unit you end up replacing again. Is it cheaper to replace all windows at once? Whole-house replacement gives you the biggest comfort gain, one crew from start to finish and a consistent look, all in a single round of measuring and installation. Harland Windows & Siding can also handle one window or one room at a time if the budget is tight, and financing is available for larger projects. Your free estimate can include both approaches so you can compare them. Do I need a permit to replace windows in Raleigh? In most cases, replacing windows in the same openings does not require a permit in Raleigh. Changing opening sizes or adding new windows may, and Harland Windows & Siding helps you work out what applies during the free estimate. Call 919-851-0060 if you are planning an addition or a larger change to your openings. How long does window installation take? Once the custom windows arrive, installation for most homes takes one to two days, with larger whole-house jobs running a little longer. Because each window is made to order, most jobs with Harland Windows & Siding start 3 to 4 weeks after booking. The crew cleans up at the end of every day, so your home stays livable throughout. Are triple pane windows worth it in Raleigh? Triple pane can make sense in Raleigh, where long, hot summers mean solar heat gain matters as much as insulation. The Ascent series installed by Harland Windows & Siding uses Advanced Thin Triple Pane Glass, and a double-hung with LowE 366 and argon is rated at a U-factor of 0.19 and an SHGC of 0.19 while staying up to 40% lighter than standard triple pane. Whether it pays off depends on your home, so the free estimate includes options at different price points. What is the difference between Heat Mirror and triple pane glass? Heat Mirror suspends a thin clear film inside the gap of a double-pane unit, reflecting heat and blocking UV without the weight of a third pane of glass. Triple pane adds a third layer of glass, and the Ascent series uses an ultra-thin center pane that lets in 35% more visible light than standard triple pane. Harland Windows & Siding is one of a small number of certified Heat Mirror installers in North Carolina and installs both, so you can compare them side by side.
