If you run a contracting business in Montgomery County, your website needs to do more than sit there and look nice. It needs to work on a phone, answer basic questions fast, and help turn calls and form fills into real jobs. That is the thinking behind how Scalable Websites builds managed websites for contractors and local service businesses.

Scalable Websites is based in Montgomery, TX, and works as a service-area business. The company serves contractors, home service businesses, and local small businesses across Montgomery County and greater Houston. That includes Montgomery, Magnolia, The Woodlands, Conroe, Willis, Spring, Tomball, Cypress, Kingwood, Humble, Houston, Katy, and Sugar Land.

The company is veteran-owned, founded in January 2025, and led by owner Preston Toor. While the business itself is new, the team brings 10+ years of experience and 200+ websites built for home service businesses. That matters when you are talking about contractor website design, because the needs are pretty specific. A roofing company is not looking for the same kind of site as a restaurant or a retail shop.

Built for contractors, not built as a generic template

A contractor website has one main job, make it easy for a customer to reach out. That is why every site is built mobile-first. A lot of your traffic is going to come from people standing in a driveway, sitting in an office, or dealing with a problem at home. If the site is hard to use on a phone, you lose leads before the conversation starts.

Every website includes the core tools most contractors need:

- Click-to-call
- Google reviews shown on the site
- Custom lead forms with instant text and email alerts
- On-page SEO from day one
- Hosting and security

Those features are part of the build, not add-ons a contractor has to chase down later. The goal is simple, help people contact you quickly and help you respond quickly.

Scalable Websites also builds custom WordPress websites, handles website redesign projects, and provides website maintenance. That gives contractors a path whether they are starting from scratch or trying to replace an older site that no longer fits the business.

Managed websites with ongoing support

A lot of small business website design projects fall apart after launch because nobody is maintaining the site. Updates get skipped, forms break, backups are missing, and small changes pile up. For a contractor, that turns into wasted time and missed opportunities.

That is why the managed side matters. Website maintenance includes unlimited update requests, security updates, uptime monitoring, daily offsite backups, and a dedicated project manager. Instead of treating the website like a one-time job, the company treats it like an active business tool that needs regular attention.

For contractors in Montgomery County, that setup can be especially helpful. If you are running jobs, quoting work, answering calls, and managing crews, the website usually is not the thing you want to babysit. A

managed model keeps the site current without making you stop what you are doing to deal with every little change.

This approach also fits businesses that need to update service areas, swap photos, change wording, or add new pages over time. Whether the job is a website redesign or a fresh build, ongoing maintenance is part of keeping the site useful.

Plan options based on where the business is today

Scalable Websites offers three plan levels, and each one is built around a different stage of growth.

The Starter plan is $95 a month for a single-page site. The Growth plan is $195 a month and includes 3 to 5 pages, missed-call text-back, unlimited lead follow-up, Search Console, and Google Analytics. The AI Enhanced plan is $295 a month and includes 10+ pages, blogging, priority support, ***web design montgomery tx*** AI SMS and chat, and SEO citations.

Every plan comes with a 6-month minimum, then month-to-month after that. There is also a 30-day money-back guarantee on signup. After 36 months, the client owns the site. There is also a free design refresh every 36 months.

That structure is practical for contractors. Some businesses just need a clean single-page web design Montgomery TX setup that gets the phone ringing. Others need more room to cover multiple services, service areas, and lead handling tools. The right fit depends on how the business operates today, not on forcing everybody into the same package.

Local service, in-person meetings, and trades served

For many contractors, it helps to sit down with somebody local and talk through the website face to face. Scalable Websites meets clients in person across Montgomery County and greater Houston. That includes businesses looking for a website designer Montgomery TX, web design Montgomery TX, or web design The Woodlands support from someone who understands local service-area businesses.

The company works with roofing, HVAC, plumbing, fire protection, fencing, concrete coatings, pools, septic, landscaping, remodeling, contractor website design montgomery tx general contractors, and 30+ more trades. That trade focus shapes how the sites are built. The layout, lead forms, review displays, and call features are all geared toward service businesses that need steady inquiries and clear communication.

The company also holds a 5.0-star Google rating, which gives contractors another signal that they are dealing with a business focused on service and follow-through.

For a contractor, a website does not need to be complicated. It needs to be clear, mobile-first, easy to manage, and built to support real customer contact. That is the lane Scalable Websites stays in, custom websites and website maintenance for home service businesses that want a site that keeps working after it goes live.
