

If you drive through Mill Creek regularly, you know how quickly traffic can build along Bothell-Everett Highway (SR-527). Stop-and-go congestion, frequent merging, busy intersections, and commuter traffic can create conditions where rear-end collisions are more likely to occur.

At [Mill Creek Chiropractic Clinic](#), we see patients who have been involved in car accidents that initially seemed minor. Some people feel relatively normal immediately after the collision, only to notice neck stiffness, headaches, shoulder tension, or back [Chiropractor](#) discomfort later.

Understanding how whiplash injuries occur and recognizing possible symptoms can help Mill Creek drivers make informed decisions after an accident.

Why SR-527 Traffic Can Contribute to Whiplash Injuries

Whiplash is commonly associated with the rapid back-and-forth movement of the head and neck during a collision. Rear-end accidents are a frequent cause because the sudden impact can place stress on the muscles, joints, ligaments, and other structures of the cervical spine.

Traffic conditions along Bothell-Everett Highway and other busy Mill Creek commuter routes can include:

- Short following distances
- Sudden braking during congestion
- Frequent merging and lane changes
- Distracted driving
- Heavy commuter traffic

Even a collision that does not appear severe can place significant stress on the neck and upper back. Symptoms may [Car accident chiropractor](#) not always be obvious immediately after the accident, particularly when adrenaline and the body's natural stress response are still elevated.

Mill Creek Chiropractic Clinic offers personalized chiropractic care for back pain, neck pain, headaches, auto injuries, sciatica, shoulder pain, and other musculoskeletal concerns. Find us at 16212 Bothell Everett Hwy,

Suite E, Mill Creek, WA 98012, or call (425) 745-4430. Contact Mill Creek Chiropractic Clinic today to schedule an appointment and take the next step toward more comfortable movement.

Common Symptoms After a Rear-End Collision

Whiplash symptoms can involve more than neck pain. After a car accident, some people may experience:

- Neck stiffness or reduced range of motion
- Headaches, including pain near the base of the skull
- Shoulder tightness or soreness
- Upper or mid-back discomfort
- Muscle tension or spasms
- Jaw discomfort
- Fatigue or difficulty concentrating
- Tingling, numbness, or discomfort extending into an arm

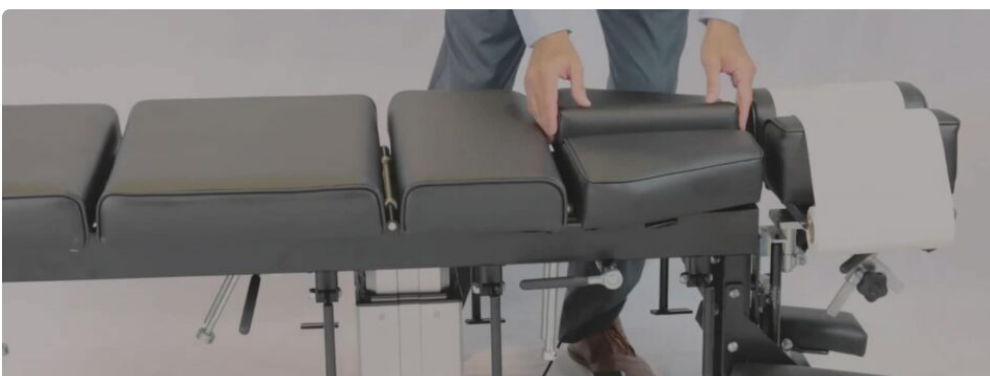

Symptoms can vary considerably from one person to another. If discomfort develops, persists, or becomes more noticeable after a collision, an appropriate healthcare evaluation can help determine what may be contributing to the symptoms.

Why Evaluation After a Car Accident Matters

After a rear-end collision, muscles may tighten as the body responds to the sudden force of the impact. Pain, stiffness, inflammation, and restricted movement can sometimes make it difficult to determine exactly which tissues or joints were affected without an examination.

Mill Creek Chiropractic Clinic provides chiropractic care for patients dealing with neck pain, back pain, whiplash symptoms, and other musculoskeletal concerns after a car accident. Visit us at 16212 Bothell Everett Hwy, Suite E, Mill Creek, WA 98012, or call (425) 745-4430. Schedule an evaluation today and find out whether chiropractic care is appropriate for your recovery.

A chiropractic evaluation can assess spinal movement, joint function, muscle tension, range of motion, and other factors that may be related to neck or back discomfort after an accident.

Treatment recommendations should be based on the individual's examination findings, symptoms, medical history, and the circumstances of the collision.
