Behind these tiles, there are 2 unique results:

1. **Gems/Rewards:** These tiles increase your existing earnings multiplier.
2. **Mines:** Revealing a mine lead to the loss of your stake and an immediate end to the round.

The longer a gamer continues to click tiles without striking a mine, the greater the multiplier climbs-- however the analytical likelihood of striking a mine increases with every successful choice.

Key Game Variables

To master the game, gamers must understand how these variables influence the possible outcome:

- **Grid Size:** Some versions enable you to change the grid (e.g., 2x3, 3x6, 5x5). Smaller grids have less mines but lower rewards; bigger grids provide enormous multipliers however substantially greater threat.
- **Mine Count:** Players can frequently select the number of mines are concealed on the grid. A greater mine count exponentially increases the multiplier for every single gem discovered but makes the game significantly more unpredictable.
