What Is a Crash Casino Game?

At its core, [cs2skin.com](#) a Crash game is a real-time betting game where a multiplier (often represented by a rocket, a balloon, or a rising line) begins at 1 × and increases continuously. Gamers position their bets before the round begins and need to choose when to "cash out" before the multiplier "crashes" (i.e., stops abruptly). If a player cashes out before the crash, they win their stake multiplied by the current multiplier. If the crash takes place before they cash out, the bet is lost.

The appeal lies in the blend of luck and risk management: the longer you wait on a higher multiplier, the greater the possible benefit, however the risk of losing the whole bet also rises.

How Crash Games Are Structured

1. **Betting Phase**-- Players place one or more bets within a set time window (normally a few seconds).
2. **Multiplier Phase**-- After wagering closes, the multiplier starts to rise from 1 × up.
3. **Cash-Out Decision**-- Players can manually squander at any time, locking in their profits.
4. **Crash Event**-- The multiplier stops arbitrarily; the exact crash point is identified by a provably reasonable algorithm.
5. **Settlement**-- All uncashed bets are lost; winners receive their payment immediately.

Since the crash point is created by a random number generator (RNG) that is openly proven (e.g., through a "provably fair" system), the video game is transparent and fair.
