Every round begins with a multiplier starting at 1.00 x. As time ticks on, the multiplier boosts-- sometimes stopping at a modest 1.05 x, and other times escalating to 1,000 x or more. The objective is easy: **money out before the video game arbitrarily crashes**. If the player stops working to squander before the crash, they lose their stake.

Most importantly, every round is independent. The reality that the last five rounds crashed instantly at 1.01 x does not suggest the next round is ensured to strike a high multiplier.
